EDGE™ Safety Hypodermic Devices

Safety Systems
LEADING EDGE
IN NEEDLE SAFETY

With a comprehensive range of sizes available as stand-alone safety needles and as combinations, EDGE™ needles support standardization across clinical areas and procedures. EDGE™ needle technology also combines the benefits of an advanced safety hypodermic needle with the properties of a conventional needle.

As with conventional hypodermic needles, the stated length of an EDGE™ needle is “true” which translates into no added dead space. Efficient use of EDGE™ needles yields medication savings when compared to other safety hypodermic needles.

EDGE™ COMBINATIONS – SAFETY DEVICE AND SYRINGE ALL IN ONE

1 mL, 3 mL, 5 mL and 10 mL combinations

SINGLE-HAND ACTIVATION KEEPS YOU SAFE

With EDGE™ needles, fingers stay well behind the bevel while activating the safety sheath, helping reduce the potential for needlestick injuries by minimizing exposure. With other devices, the greatest exposure to possible needle-stick injuries occurs when activating the safety mechanism.
INTEGRAL SAFETY WITH THE LOOK OF A CONVENTIONAL NEEDLE

Molded arrow points in direction of bevel

ISO standard colour-coded hub and safety sheath assembly enables rapid identification of needle gauge size

Bevel-oriented needle – bevel is “up” when the safety sheath is positioned at 3-o’clock so the injection site is not obscured

Apply downward pressure on the syringe until the needle locks into the safety sheath with an audible click.

Discard the syringe and needle in accordance with sharp safety procedures.
